PING ERROR TEST

Explain proper scenario for following ping errors ?

Destination host unreachable

When PC_A send a data to PC_B, first PC_A checks Sys. route-table, if any route for PC_B, if does n't have any route to PC_B in Sys. route table. If we ping PC_B IP in PC_A. It shows Destination host unreachable.

Request timed out

When PC_A sends a data to PC_B ^(request) successfully. But PC_B Can't send a data to PC_A, that Means PC_A send request to PC_B successful. But PC_B Can't reply to PC_A. So when we ping PC_B IP in PC_A, It shows Request timed out.

Reply from some ip destination host unreachable

When PC_A Sends a data to PC_B, it reaches router. Router finds it can't see a route to PC_B. Then it sends a msg to PC_A. ex C 10.0.0.1 is destination host unreachable.

TTL expired

Time to live (TTL)

- * it happens when looping in layer 3
- * when it helps?

It helps to stop layer 3 loop

∴ Not resolve the loop
help to stop the loop
